e

Office Action Summary	Application No. 09/845,813	Applicant(s) ELD ET AL.	
	Examiner Kelvin Lin	Art Unit 2142	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 19 October 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,2,5-14,16-20 and 23-31 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,2,5-14,16-20 and 23-31 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Detailed Action

Reopening of Prosecution After Appeal Brief or Reply Brief

In view of the appeal brief filed on 10/19/05, PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

Response to Arguments

Applicant's arguments with respect to claims 1,2, 5-14, 16-20, and 23-31 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1,2, 5-14, 16-20, and 23-31 are rejected under 35 USC 103(a) as being Unpatentable over Poole et al., (U.S. Patent 6006242) in view of Headings et al., (US Pg Pub No. 2002/0143782).
2. Regarding claim 1, Poole teaches a method of distributing a plurality of documents, (Poole, col.51, l.45-53, in which Poole teaches that "... provides the inferencing capabilities of the Inferenced Engine in a form that may be distributed to end-users ..The IEEE standard language scheme is used to translate the inferencing power of the inference engine into a distributable form ").

the method comprising :

- associating a metadata file with each of the documents (Poole, col. 5, l.6-9, The definition of metadata includes: “ .. information required by the runtime..” - The Microsoft Computer Dictionary, 4th edition, here, the metadata file is the entity reference);
- applying at least one content attribute to each of the documents, including analyzing a content of each of the documents (Poole, fig.4, col.7, l.17-21, which teaches document construction, determining (analyzing), and resolving), and assigning content attribute values to the content attributes for each of the documents based on the content thereof (Poole, col.43, l.59-60). Including appending the metadata file of each of the documents with the at least one content attribute (Poole, col. 14, l.32-38); and the content attribute value (Poole, col. 13, l.43-47) thereof;
- assigning at least one content group to each of the documents based on the at least one content attribute and the content attribute value (Poole, col. 13, l.43-47) thereof, including modifying the metadata file of each of the documents to include the at least one content group thereof (Poole, col. 11, l.59-67); and
Poole teaches limitations discussed above, but fails to teach distributing the documents based on the content group.
However, Headings teaches:

- distributing the documents based on the at least one content group of each of the documents (Heading, [0029], I.17-33,[0030], I.1-3, in which the distribution of a media asset or group of media assets (literary works) related to a parameter of the business rule.

Moreover, [0034], I.5-8, the business rules include the distribution platform. [0034], I.1-3, the business rule associated with item data structure combination with specified web publishing, and [0032], I.1-3, Fig. 4a, the data structure involves selecting (analysis) item type and internal title. Furthermore, [0041], media assets are encoded to permit distribution over network.)

It would have been obvious to one ordinary skilled in the art at the time of invention by incorporating Headings' content distributing system for using associated metadata and business rule device to distribute media assets ([0030], I.7-9) with Poole's publishing structure (Poole, fig.4 , element 141)

The motivation would be that the combination of Headings' and Poole's structure by implementing Headings' Content management system, and distributing structure to Poole's system of dynamically creating a document. Therefore, the dynamic document construction methodology can be implemented using a distributed networking approach (Poole, Abstract).

3. Regarding claim 2, Poole further discloses the method of claim 1, wherein associating the metadata file with each of the documents includes identifying at least one of a title, an author, a date, and an identification of each of the documents (Poole, col.21, l.17).
4. Regarding claim 5, Poole further discloses the method of claim 1, wherein assigning the at least one content group to each of the documents includes defining a plurality of content groups including the at least one content group, defining at least one condition for each of the content groups, and assigning the at least one content group to at least one of the documents if the at least one of the documents satisfies the at least one condition of the at least one content group (Poole, Table 14&15, col. 25, l.14-67, col.51, l.45-53).
5. Regarding claim 6, Poole further discloses the method of claim 5, wherein defining the at least one condition for each of the content groups includes specifying at least one of a plurality of content attributes including the at least one content attribute and a content attribute value for the at least one of the plurality of content attributes (Poole, col.16, l.56-59).
6. Regarding claim 7, Poole further discloses the method of claim 5, wherein assigning the at least one content group to the at least one of the documents includes assigning at least one content group value to a content group attribute of the at least one of the documents (Poole, col.14, l.29-39, col. 25, l.17-20).
7. Regarding claim 8, Poole further discloses the method of claim 7, wherein

modifying the metadata file of each of the documents to include the at least one content group includes modifying the metadata file of the at least one of the documents to include the at least one content group value for the content group attribute (Poole, Col. 69, l.45-54).

8. Regarding claim 9, Poole further discloses the method of claim 1, wherein distributing the documents includes defining a plurality of content categories, associating the at least one content group with at least one of the content categories, and distributing for the at least one of the content categories each of the documents assigned the at least one content group (Poole, col. 26, l.66-67, col. 33, l.14-15, col.51, l.45-53).
9. Regarding claim 10, Poole further discloses the method of claim 9, wherein defining the plurality of content categories includes defining at least one content sub-category for the at least one of the content categories, and wherein associating the at least one content group with the at least one of the content categories includes associating the at least one content group with the at least one content sub-category (Poole, col. 25, l.45-50, here, the container functions similar to the categories in this art).
10. Regarding claim 11, Poole further discloses the method of claim 9, wherein distributing the documents includes defining a navigational model identifying the content categories, presenting the navigational model to an audience, receiving a request for documents associated with one of the content categories from the audience, and distributing the documents associated with the

one of the content categories to the audience, including distributing the documents assigned the at least one content group associated with the at least one of the content categories (Poole, col. 9, l.55-64, col.51, l.45-53).

11. Regarding claim 12, Poole further discloses the method of claim 11, wherein distributing the documents further includes defining a communication link between a host of the navigational model and the audience, wherein receiving the request for documents includes receiving the request for documents associated with the one of the content categories from the audience via the communication link, and wherein distributing the documents includes distributing the documents associated with the one of the content categories to the audience via the communication link (Poole, col.9, l.50-64, col.51, l.45-53).
12. Regarding claim 13, Poole further discloses the method of claim 12, wherein defining the communication link includes defining an Internet communication link between the host of the navigational model and the audience (Poole, col.11, l.22-24).
13. Regarding claims 14-17, have similar limitations as claims 1, 3, 5, and 6. Therefore, claims 14-17 are rejected for the same reasons set forth in the rejection of claims 1, 3, 5, and 6.
14. Regarding claim 18, Poole further discloses a document management system adapted to manage distribution of a plurality of documents(Poole, col.51, l.45-53), the document management system comprising:
 - a metadata architecture system adapted to analyze a content of

each of the documents apply at least one content attribute to each of the documents based on the content thereof (Poole, fig.4, col.7, l.17-21, which teaches document construction, determining (analyzing), and resolving),

assign a content attribute value to the content attribute of each of the documents based on the content thereof, and append a metadata file of each of the documents with the at least one content attribute and the content attribute value thereof; (Poole, col. 14, l.32-38, col.43, l.59-60);

- a logic rules application system adapted to assign at least one content group to each of the documents based on the at least one content attribute and the content attribute value thereof, and modify the metadata file of each of the documents to include the at least one content group thereof (Poole, col. 46, l. 56-67); and
- a document distribution system adapted to distribute the documents based on the at least one content group of each of the documents (Heading, [0029], l.17-33,[0030], l.1-3, in which the distribution of a media asset or group of media assets (literary works) related to a parameter of the business rule. Moreover, [0034], l.5-8, the business rules include the distribution platform. [0034], l.1-3, the business rule associated with item data structure combination with specified web publishing, and [0032], l.1-3, Fig. 4a, the data

structure involves selecting (analysis) item type and internal title.

Furthermore, [0041], media assets are encoded to permit distribution over network.).

15. Regarding claim 19, Poole further discloses the document management system of claim 18, further comprising: a document management data storage system adapted to store the documents therein (Poole, col.8, l.5-7).
16. Regarding claim 20, Poole further discloses the document management system claim 18, wherein the metadata file of each of the documents includes at least one of a title, an author, a date, and an identification of the respective one of the documents (Poole, col.21, l.17).
17. Regarding claim 23, Poole further discloses the document management system of claim 18, wherein the logic rules application system defines a plurality of content groups including the at least one content group and defines at least one condition for each of the content groups, and wherein the logic rules application system is adapted to assign the at least one content group to at least one of the documents if the at least one of the documents satisfies the at least one condition of the at least one content group (Poole, col. 17, l.23-33).
18. Regarding claim 24, Poole further discloses the document management system of claim 23, wherein the at least one condition for each of the content groups specifies at least one of a plurality of content attributes including the at least one content attribute and a content attribute value for the at least one of the plurality

Art Unit: 2142

of content attributes (Poole, col.16, l.56-59) .

19. Regarding claim 25, Poole further discloses the document management system of claim 23, wherein the logic rules application system is adapted to assign at least one content group value for the at least one content group to a content group attribute of the at least one of the documents (Poole, col. 42, l.43-45).
20. Regarding claim 26, Poole further discloses the document management system of claim 25, wherein the logic rules application system is adapted to modify the metadata file of the at least one of the documents to include the at least one content group value for the content group attribute (Poole, col. 11, l.59-67).
21. Regarding claim 27, Poole further discloses the document management system of claim 18, wherein the document distribution system defines a plurality of content categories, and wherein the document distribution system is adapted to associate the at least one content group with at least one of the content categories and distribute for the at least one of the content categories each of the documents assigned the at least one content group (Poole, col. 26, l.66-67, col. 33, l.14-15).
22. Regarding claim 28, Poole further discloses the document management system of claim 27, wherein the document distribution system defines a navigational model identifying the content categories, and wherein the document distribution system is adapted to present the navigational model to an audience, receive a request for documents associated with one of the content categories from the audience, and distribute the documents associated with the one of the content

categories to the audience (Poole, col. 9, l.55-64).

23. Regarding claim 29, Poole further discloses the document management system of claim 28, wherein the document distribution system is adapted to distribute the documents assigned the at least one content group associated with the at least one of the content categories (Poole, col. 9, l.62-64).
24. Regarding claim 30, Poole further discloses the document management system of claim 28, wherein a host of the navigational model is configured to communicate with the audience via a communication link, and wherein the document distribution system is adapted to receive the request for the documents associated with the one of the content categories from the audience via the communication link and distribute the documents associated with the one of the content categories to the audience via the communication link (Poole, col.9, l.50-64).
25. Regarding claim 31, Poole further discloses the document management system of claim 30, wherein the communication link includes an Internet communication link (Poole, col.11, l.22-24).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kelvin Lin whose telephone number is 571-272-3898.

The examiner can normally be reached on Flexible 4/9/5.

Art Unit: 2142

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Caldwell can be reached on 571-272-3868. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
